Managed Services

Our Managed Services plan is designed to take the hassles of technology out your business.

Management Support

- Single point of contact for all I.T. issues including employee add, change and delete
- Quarterly account reviews covering: performance, specific problems or issues, new opportunities for I.T. benefits, security reviews and recommendations
- Asset tracking and management of computers and servers
- Network documentation
- Anytime access for technology questions
- Vendor and warranty coordination on hardware and Internet connectivity
- Turnkey purchasing of new hardware
- Online portal for review of activity and billing

User Support

- Single point of contact for I.T. support through tray icon, chat, phone call, email or web
- Support email, network and server access for: email login (password, reset), computer login (password reset), access controls (directories) and workstation restrictions
- Support for problems related to: computer usage, Microsoft Office (install, setup, upgrade), Internet browsers, Cloud storage (Box, Dropbox, OneDrive), printing (driver installs, can't print), connectivity (network, Internet) and performance (slow, won't start)
- Support for mobile devices for: connection to office Internet, access to company email and cloud storage
- Access to online documentation and "cheatsheets"

Workstation Management

- Setup antivirus and malware protections
- Remove virus and malware threats as required
- Install and monitor website protections
- Install and monitor operating system updates (Mac, Windows)
- Monitor for disk drive errors
- Coordinate warranty work for hardware problems (PC, monitor, keyboard, mouse, and docking station)

Server Management

- Setup antivirus and malware protections
- Remove virus and malware threats as required
- Install and monitor malicious website protections
- Install and monitor operating system updates
- Coordinate hardware repairs with vendors
- Monitor and correct disk drive errors
- Coordinate warranty work for hardware problems

Network Management

- Design and maintain network efficiency
- Detect and correct network bottlenecks
- Manage wireless access
- Setup and manage content filtering as needed
- Manage and coordinate ISP issues
- Monitor network performance

Firewall & Router Management

- Update firmware and device settings for security
- Manage firewall subscriptions (if applicable)
- Configure network to support workstations and servers
- Monitor firewall and router performance
- Manage passwords for all network devices

Optional Monthly Services

- Backup and disaster recovery services
- Management of Exchange or database servers
- Management of virtualization solutions
- PBX, phone system or smartphone management
- Printer toner management
- Website monitoring
- Email migration

Managed Security

Cybercrime is a \$500+ billion global problem. In 2016, ransomware attacks, just one form of cybercrime, occurred every 20 seconds and cost small and medium sized businesses over \$1 billion dollars in ransoms alone. Now more than ever, protecting your business, reputation, and customers against these risks requires vigilance and expertise.

With upgraded security, you'll add additional layers of protection to our basic managed services including:

- Increased email spam reductions
- Increased protections when using devices away from the office
- Additional protections against ransomware and malware
- Advanced AI detection of unusual behaviors or patterns
- Identification of threatening log ins
- Protections against password theft

Managed Security is for clients required to meet privacy protection regulations or who are working with confidential or proprietary information.

Cloud PBX Phone System

Phone System is the Microsoft technology for enabling call control and PBX capabilities in the Office 365 cloud with Skype for Business Online and Microsoft Teams. Phone System allows you to replace your existing PBX system with a set of features delivered from Office 365 and tightly integrated into your organization's cloud experience.

With Phone System, your users can use Skype for Business Online and Microsoft Teams to take care of basic call control tasks, such as placing and receiving calls, transferring calls, and muting and unmuting calls. Phone System users can click a name in their address book, and Skype for Business or Microsoft Teams places a call to that person. To place and receive calls, Phone System users can use their mobile devices, a headset with a laptop or PC, or one of many IP phones that work with Skype for Business and Microsoft Teams. For admins, Phone System provides the ability to manage calling within the same admin console used for messaging, collaboration, and so on.

Power BI

The concept of business intelligence has been around in various forms for more than a century and a half. At its core, BI is about understanding the facts - and the relationship between facts - in a way that guides decision-making and action. From a technology standpoint, BI is a set of techniques and tools for transforming raw data into meaningful business insights.

IT professionals have consistently played a key role in unlocking value from data by creating and maintaining data warehouses, building and exposing complex data models, or report creation. At the same time, end users have been relying largely on the support from IT to meet their BI needs, including the development of reports.

Microsoft Excel paved the way for self-service BI, as it was the first step in giving business analysts the ability to gain insights from data. Microsoft made self-service BI a reality with Power Pivot, extending capabilities to Excel that were previously found only in databases. These innovations enabled analysts to deliver insights from greater volumes of data and a broad array of data sources.

Today, BI continues to evolve and Microsoft is leading the way by bringing a new generation of BI to organizations, with solutions that will extend and build on, rather than replace, existing analytics platforms and tools. With Power BI, a business analytics service for visualizing and analyzing all of your data in one place, Microsoft's goal is to bring business intelligence to *everyone*.

With Power BI, the IT professional can

- Focus on what they love – Data, and provide quality and authoritative data sets to end users, business analysts and data scientists
- Meet the growing business need for consumable data
- Spend less time on infrastructure maintenance or report development
- Focus on increasing demand for real-time and streaming data sources
- Implement data governance and data-level security for cloud and on-premise data sources

The BI analyst is able to

- connect to authoritative data with ease and confidence
- visually explore data
- navigate through data quickly, optimized for performance
- pull data together from different sources, create data models and impactful, interactive reports
- easily share data models and reports with end users

The end user is empowered to

- get started and see results quickly
- monitor in real-time what matters most, in one place
- explore and use certified data sets to find immediate answers
- share reports and dashboards with others
- stay connected from anywhere

With Power BI, Microsoft is expanding the reach of analytics to more users than ever before.

Office 365

Get the worldwide standard for desktop apps like Word, Excel, PowerPoint and more. You can see, view and edit across any of your devices with desktop and mobile applications for Windows PCs, iOS, Android and Mac. Share and edit your documents in real-time with your team with OneDrive. Create your business pitch, marketing plan, or budget proposal with professionally designed templates. Get your business jumpstarted with:

- Monthly updates
- Cloud storage
- Collaboration across your devices

Combined with our expertise in Office 365 implementation, Office 365 is a huge step up from traditional packaged office apps.

Resolve Policy Exception - Cloud Apps

Ensures no applications are installed that are flagged as Cloud Storage.

Exception List

- Dropbox (Dropbox, Inc.)
- Dropbox Update Helper (Dropbox, Inc.)
- Box Sync (Box Inc.)
- iCloud (Apple Inc.)
- Microsoft OneDrive (Microsoft Corporation)

Office-365-Ready Conference Room

With a full conference room upgrade, you'll be able to work with remote workers as closely as if they were in the same office. Office 365 makes it simpler than ever to get started. Office 365 conferencing features:

- **Meet face-to-face in HD video** - 1080p video and high-speed, low-bandwidth screen sharing put you and up to 250 people all at the same table. Participant pictures with job titles and video that locks on whoever is talking helps everyone know who's who.
- **Make team meetings more productive** - Schedule a meeting or start an ad hoc, real-time meeting to co-author a document or collaborate on a project. Use whiteboard, polls, Q&A, and built-in IM during meetings to draw out ideas and work together to solve challenges as if you're in the same room.
- **Meet on the go whenever you want** - Never miss a meeting. The Microsoft Teams apps for Android, iOS, Windows and MacOS let you meet, chat, and call into meetings on smartphones and tablets. 1 Upload photos from your smartphone or stream its video into a meeting so team members can see what you see. Or see who's online and send them an instant message to get a fast response.
- **Make meetings count, even after they're over** - With team chats, calls, and activities visible to the whole team and chats preserved across devices, team members stay in the know even after a meeting. You can also record meetings to be referenced later or for those unable to attend.
- **Transform your meeting spaces** - From small huddle bays to large conference rooms, enjoy a rich, online collaboration experience that's simple to use and manage. Start an online meeting with one-touch join, project it to a room display, and share it with remote participants on smartphones or laptops.

But, to make it work easily, upgrade your meeting room so it helps you conduct meetings better with:

- **One-button conference starts** - Convenient controls make it easy to get the meeting started.
- **Integrated Office 365 calendaring** - Schedule meeting resources easily using Outlook.
- **Room camera** - Dedicated room camera makes it easy for outside attendees to feel a part of the team.
- **Big-screen video display** - Wall mounted television makes 1080p video easily seen by all.
- **Quality room audio** - You don't understand what you don't hear so don't settle for any less than quality audio.

Don't let a lack of conferencing keep you from working effectively with and monitoring remote workers.

Data Governance Audit

As your data grows, it's important to implement a comprehensive data governance strategy to automatically classify, govern and protect sensitive data across devices, apps and cloud services, and apply encryption and access governance strategy.

Our Data Governance Audit surveys your data usage throughout your organization and provides best-practices recommendations for ensuring your data is protected and compliant.

Laptop Refresh

Upgrading outdated or unreliable equipment is the fastest way to get people working more productively. Choose from three different laptop options based on need:

- **Surface Pro 6** - Lightweight and powerful, the Surface Pro 6 offers all-day battery for on-the-go needs. In the office, Surface Pro 6 docks easily to monitors and keyboards.
- **Surface Laptop** - Mobility in a traditional laptop. All-day-battery, great display and first-class keyboard differentiate this laptop from competitors.
- **Surface Book** - Powerful desktops with upgraded video for use by power-users and creative-focused staff.

With flexible leasing and payment plans, laptop refreshes can boost the bottom line with more productivity.

Deploy Teams to All Users

When teams need to spend time looking for resources, wait for other people to get back to them or try to knit together information from different software or devices, projects end up running late. Team members rush to meet deadlines making it almost impossible to do their best creative work.

But isn't working in a team supposed to make you more efficient—not less? That's the idea, but you've probably noticed it doesn't always work out that way.

Have you ever found yourself saying, "Who has the latest version of that market analysis? I know it's been updated, so how come the only one I can find is months old?" or "It's taking too long to get feedback on the budget from the team; we're running out of time!"

That's why Microsoft has developed Teams—the chat-based workspace in Office 365—so you can get all the creative benefits of teamwork and free your teams from these productivity sinkholes.

Find what you're looking for—instantly

One of the biggest time-wasters for teams is looking for content, tools, contacts and conversation threads. Imagine how much more effective everyone would be if they had instant access to everything they need—right in Office 365.

Microsoft Teams uses powerful, integrated search capabilities and built-in access to SharePoint, OneNote and Planner, so team members can find what they're looking for—instantly. Because every document shared in Microsoft Teams is saved to the cloud, team members work from the latest version—no searching.

Get that feedback

Team members often get stuck in a holding pattern because they're waiting for the feedback and sign-off to drive a project forward. They try to set up conference calls, but to-and-fro scheduling burns up time. Even when they finally do get on a call, make edits to project documents and send out the revised versions, they're often stuck waiting again for sign-off.

All that changes when they can quickly start a team, private chat or online meeting with decision-makers and collaborate on shared files to secure approval right away. Integrated notifications plus side-by-side chat while viewing a document enables on-the-spot editing and finalizing of materials.

Bring relevant information into Microsoft Teams

Team members can tailor workspaces with the specialized content and apps they need every day. For example, using Microsoft Teams, they can add tabs like a Word document or Power BI dashboard to provide quick access or take quick action with bots. Add apps like Jira or Trello to bring relevant information into your hub for teamwork.

You can do all this with built-in security and compliance features, including data encryption and multi-factor authentication for enhanced identity protection.

And now for the best part about teamwork

Microsoft Teams lets you fully embrace the upside of teamwork—frictionless sharing that makes good ideas exceptional. Seize the potential for dramatic innovation by supporting a collaborative culture, and your business can:

- Widen the idea pipeline.
- Accelerate time to market.
- Deliver higher-quality products and new customer experiences.

Resolve Endpoint Issue

DESKTOP-F5FIUTN needs to be replaced. It is working slow and cannot be upgraded any further.

Decision Making

Decision making covers the products and services that help you make better decisions about your business. Products such as Power BI dashboards, analytics, consulting and other services are often starting points to address this need. It is at the top of the I.T. stack in terms of value to an organization.

The concept of business intelligence (BI) has been around in various forms for more than a century and a half. At its core, BI is about understanding the facts - and the relationship between facts - in a way that guides decision making and action. From a technology standpoint, BI is a set of techniques and tools for transforming raw data into meaningful business insights.

Microsoft Excel paved the way for self-service BI, as it was the first step in giving business analysts the ability to gain insights from data. Microsoft made self-service BI a reality with Power Pivot, extending capabilities to Excel that were previously found only in databases. These innovations enabled analysts to deliver insights from greater volumes of data and a broad array of data sources. BI continues to evolve, and a new generation of tools are available to help you extend and build on, rather than replace, existing analytics platforms and tools.

Collaboration

Collaboration covers the products and services that you use to work better together internally or with your external customers. Line-of-business applications, CRMs, Microsoft Teams, Cloud PBX, conference rooms, conferencing solutions and training are often starting points to address this need. Collaboration builds on the layers of the I.T. stack to deliver results that businesses can see on their bottom lines.

New digital workplace technologies are an integral piece of the modern workplace. The most effective new tools approach work in an entirely new way. For years, workplace technologies have focused on the individual—from personal computers to individual workstations to spreadsheets, word processors, and communication tools catering to employees working largely in isolation. However, nearly everything of value in business requires employees working together to achieve shared results. And as companies become more dispersed physically, software designed for individual tasks does little to help. Collaboration tools bring companies together internally and help them achieve closer and more profitable relationships with clients.

Productivity

Productivity covers the products and services that help you get more done with less effort or less staff. Office 365, with its rich set of features and applications, is often the starting point to address this need. It is a key part of the I.T. stack that lets businesses get the most from their investments in people and processes.

In ways large and small, our lives are being changed by digital technology. Ever-present mobile devices enable us to work from anywhere and stay in touch with the people we care about and the information we need from everywhere. From precision agriculture and automated manufacturing, to personalized medicine, autonomous vehicles, social media, and augmented reality games, every industry, every economy, and every aspect of how people manage their day-to-day lives is being reshaped.

We've never seen anything quite like what is happening right now. According to World Economic Forum, the speed of current breakthroughs has no historical precedent. Driven by the advent first of the steam engine, then electric power and the telephone, and now digital information, previous industrial revolutions gave rise to progress that moved at a linear pace. But transformation today is exponential. By some estimates, change today is happening 10 times faster and at 300 times the scale of the First Industrial Revolution. The change is so momentous that it is referred to as the Fourth Industrial Revolution. And the clear consensus is that the pace of change is only going to quicken. This creates an overwhelming imperative for businesses to respond—and respond rapidly.

Compliance

Compliance covers products and services that help you meet your compliance requirements. Every jurisdiction and industry has compliance requirements that your company must address. Monitoring software, technical assessments, audits and documentation processes are often starting points to address this need. Compliance builds on the previous I.T. layers to ensure they are enforced and documented consistently.

In general, compliance means conforming to government regulations and internal policies. Compliance can range from basic consumer protections all the way through complex industry regulations. Compliance helps your company ensure they meet their internal policies for employee behaviors, as well as meet their obligations involved with potential litigation and regulatory audits. Compliance is not just a burden imposed by governments; it is way to minimize the expense and risk of running a business.

Regulatory compliance describes the goal that organizations aspire to achieve in their efforts to ensure that they are aware of and take steps to comply with relevant laws, policies, and regulations. Due to the increasing number of regulations and need for operational transparency, organizations are increasingly adopting the use of consolidated and harmonized sets of compliance controls. This approach is used to ensure that all necessary governance requirements can be met without the unnecessary duplication of effort and activity from resources.

Regulations and accrediting organizations vary among industries and jurisdictions, with examples such as PCI-DSS and GLBA in the financial industry, FISMA for U.S. federal agencies, HACCP for the food and beverage industry, and the Joint Commission and HIPAA in healthcare. In some cases, other compliance frameworks (such as COBIT) or even standards (NIST) inform on how to comply with regulations.

Continuity

Continuity covers products and services that protect your business against Internet outages, malware, natural disasters, employee accidents and other threats that can make it impossible for your business to operate for hours and sometimes even months. Backup services and cloud infrastructure are often starting points to address this need. Continuity is a critical layer of the I.T. stack that protects businesses from the unexpected.

Business continuity planning (or business continuity and resiliency planning) is the process of creating systems of prevention and recovery to deal with potential threats to a company. In addition to prevention, the goal is to permit ongoing operation, before and during execution of disaster recovery.

An organization's resistance to failure is "the ability ... to withstand changes in its environment and still function". Often called resilience, it is a capability that enables organizations to either endure environmental changes without having to permanently adapt, or the organization is forced to adapt a new way of working that better suits the new environmental conditions.

Businesses use information technology to quickly and effectively process information. Employees use electronic mail and Voice Over Internet Protocol (VOIP) telephone systems to communicate. Electronic data interchange (EDI) is used to transmit data including orders and payments from one company to another. Servers process information and store large amounts of data. Desktop computers, laptops and wireless devices are used by employees to create, process, manage and communicate information. What do you when your information technology stops working?

An information technology disaster recovery plan (IT DRP) should be developed in conjunction with the business continuity plan. Priorities and recovery time objectives for information technology should be developed during the

business impact analysis. Technology recovery strategies should be developed to restore hardware, applications and data in time to meet the needs of the business recovery.

Security

Security covers the products and services and protect your personal, client, financial and business data from hackers, rogue employees and sometimes even competitors. Antivirus, Azure Active Directory, CloudApp Security are all potential solutions for this area. Unfortunately, security has become the most important layer of the I.T. stack.

Cybercrime is becoming a multi-trillion-dollar industry. Ransomware damage alone is expected to reach over \$11 billion dollars in 2019 with a business hit on average every 14 seconds. Cybercrime is real and every company and user is a potential target. Huge data breaches at larger companies provide mailing lists for hackers. If any email at your company was scooped up in one of these breaches, it's almost a guaranteed that the email will be targeted.

Over 90% of all attacks occur via email, but other techniques can be just as successful. That's why it is important to have and maintain multiple layers of security to protect users in the office and when they work from home or the coffee shop.

Efficiency

Efficiency covers the products and services that make your business more productive using laptops, desktops, servers, networks and other physical devices that provide access to resources that are required for productivity, collaboration and improved decision making. It is the first layer of the I.T. stack that enables all that comes above.

The rapid increase in computing power, mobility and networking is providing companies with faster tools with which to improve their efficiency. Current laptops, for example, can save employers almost \$1,500/year in worker productivity compared to laptops from five years ago. Comparable savings are apparent in almost every category of older I.T. infrastructure.
